Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: Solar Net-Metering

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Regards,
Paul Whiteaker

Subject: solar power

Dear Arizona Corporation Commissioners:

My husband and I are solar owners who have made the investment in solar technology primarily to increase the use of natural energy and reduce the carbon imprint which is causing global warming. Being financially conservative individuals, we were able to support our decision to move to solar energy as a result of a realistic cost benefit analysis which was based on production and current net metering practices.

We still pay our utility an average of \$10 a month for miscellaneous expenses which are deducted from our annual net metering reimbursement but this small amount does not cover our annual expenses. I am sure we are not getting the top rate for the excess electricity we produce and that the utility is benefiting from our ability to generate additional electricity into their grid . I am sure you can confirm my supposition by requesting information from the utility.

So why are is the commission considering the elimination of net metering? Its elimination would clearly increase the profits of the utility company and penalize the consumers who have converted to solar energy. It would also reduce the incentive for other consumers to install solar technology thereby continuing our dependency on foreign oil and the pollution of our environment.

I urge you to protect net metering, to protect the solar consumers and the environment. Our children's environmental future depends on decisions such as this one.

Sincerely,
Liz and Walter Knoop

Subject: Protect Net Metering

Dear Corporation Commissioner,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Martin Galchutt

I understand that in the very near future you all will have to make a decision in regard to net metering of Solar produced power by privately owned systems, such as the one I installed on my home in Sun Lakes.

It is a disturbing fact that at the time I installed our system the utility companies were encouraging consumers to install these systems and now that there a number of them installed and producing power the ugly head of monopolies is coming up and expecting consumers to resolve their apparent inability to manage their fixed costs which have always existed with or without the solar systems.

Please represent the consumers of Arizona rather than big monopolies.
Thank You in advance for your help with this matter.

Subject: Protect Net Metering and Jobs

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments. My decision to install solar for my home was both due to the long-term cost savings and for the environmental benefits it provides. My solar system was extremely expensive to install and I believe the net metering that is offered helps to offset the cost and helps me feel good about the decision I made to make our world a little greener.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Sincerely,

Amy Braun

Commissioner Email

SUBJECT LINE: Protect Net Metering

Dear Corporation Commissioner,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a

certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Rose Hill

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

My utility is TRICO Electric and I am satisfied with their service. Before installing my 3.8KWH solar array, I looked into buying a solar panel from their "solar farm." The pay-back would have been nearly 9 years! However going with Solar City I was able to procure more energy and a pay-back of 5.5 years. Competition will always make a company more efficient and improve service.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

Additionally, in a time in our history when there is little confidence in government at all levels. I do not feel it appropriate for you to '*change the rules*' so to speak for those homeowners who have Gone Green, who have run the numbers on the payback of their Green investment and, as a result, have made a substantial investment in home solar panels. Your proposed change would blow our Green Investment out of the water and would further damage our confidence in government promises made. Have you considered as an option grandfathering those who already have invested significantly based on a net-metering promise?

I strongly urge you to protect net-metering *or at a minimum grandfather those who have already invested based on promises made..* I will be watching how each of you vote on this issue.

Thank you for consideration of my points of view.

Sincerely,

Brad C

Subject: Net Metering

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

After many advertisements by the utility companies and the state urging us to "go green" and install solar systems which will also save us money, I installed a solar system.
Now that this has been done, the greedy utility companies want to change the rules.

Installing a solar system is still very expensive and a major investment for most homeowners. In most cases the return on investment is several years and the explosion of solar installations only happened within the last two years. By changing the net metering rules on the public this well intended investment would be turned into a huge loss.

I am well aware of the utility company lobbyists and their large contributions to political campaigns so I realize voting in the public interest can be costly. Please remember how you vote on this issue not only effects the public, your constituents and your friends, but you and your immediate and extended family.

Please stop the utility companies from committing what almost looks like fraud. The old "bait & switch" program.

Thank you very much for your help.

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Dear Corporation Commissioner

I am writing to request that you continue to support net metering for solar homeowners in Arizona.

It is a useful and powerful incentive for people to transition to clean energy, which is vital for the long term health of the state and the planet. As a solar homeowner, it helps defray the cost of solar power while contributing benefits to the system. It is fair and farsighted.

Please consider homeowners in the net metering debate and allow it to continue.

Subject: Net Metering

Corporation Commissioner,

Utility companies are trying to get out of compensating us solar customers for our energy production. We went with solar in the first place to save money both for ourselves and the utilities. This is totally backwards thinking, since the need to build more power plants and the associated infrastructure is greatly reduced and thereby shouldn't the power that we are generating be even more valuable than what they are currently compensating us for?

Please, reject any changes to the current Net Metering policy.

Sincerely
Donald Sattler

I urge you to protect net metering.

Currently TRICO is confiscating almost 200 KWh per month from what my system is sending to the grid, rather than adding it to the amount I expect to be banked for my use during the hot summer months. I consider this robbery and it needs to be stopped. I never agreed to allow this when I contracted to have

solar on my home from Solar City. If TRICO is going to skim off the top, they should pay the provider (myself and other solar owners) for the power. We solar owners will have become the generating station and TRICO should not get that power for free, and make money by charging a non-solar customer for the power I've generated.

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: Arizona's Net Metering Policy

Dear Elected Commissioners,

As an Arizona resident, solar supporter, and most importantly a voter with a voice, I am writing to urge you to protect the agreed upon net-metering policy with the Arizona utilities.

Net metering allows homes and businesses that produce their own clean, renewable energy to simply receive fair credit for the valuable clean power they deliver to the grid for others to use and benefit. This clean energy helps lessen the strain on our antiquated grid system during peak periods of consumption. It helps ensure that Arizona will become the solar capital of the country, provide good jobs for Arizonans, and help lessen the demand of bringing in finite fossil fuels from across the country that pollute our air and water. Would anyone admit that burning less coal and natural gas is really a bad idea?

Arizona has a real opportunity to lead the way in continuing to develop the solar industry. This is an industry that has many tangible and intangible benefits for our region. In-state job growth, increasing tax base, and reduction of pollution are just to name a few. One of Arizona's most precious resources, water, is currently being wastefully and unnecessarily used to cool utility equipment as coal and natural gas are being burned to produce dirty energy....imagine the possibilities for conserving this wasteful use of water for Arizona's future needs.

Some utilities in the state are trying to change the rules of the game, to which they agreed, in the name of protecting revenues. We are discussing the same industry that is slow to evolve, slow to become better, and all the while being guaranteed a return of profit on their investments through consumer rates? Not a single other industry in this country can operate this way.

Consumers have decided that they want a better way, a cleaner way, and a more sustainable way to receive their energy. In nearly every industry in this country, it has been decided by governments that competition is good....it is fair....and it is necessary. Do any one of you believe that the communications industry of today is worse off because the once monopolistic landline telephone industry that enjoyed relatively no competition through the 80's received a competitor in cell phone technology? Of course not. Do any of you miss that long distance phone bill every month? That almost sounds absurd today. Why on Earth then would we all; as rate payers, as residents, as those that appreciate the natural beauty of this great state, seek to limit this conduit of change to cleaner, cheaper sources of energy? Doesn't that also sound a bit absurd?

My guess is that I do not have to remind any of you that, as elected officials, your job is to make policy in the best interest of all Arizonans, not just those in the utility industry. I urge and implore you to protect this net metering policy that is crucial to the independence of our energy production, the growth of an industry that

provides thousands of jobs in our state, and also the reduction of pollution from the production of dirty energy. I, along with many voting Arizonans, fail to see the downside of those three opportunities. We will attentively be watching how our elected officials decide our state's future energy policy.

Sincerely,

Michael Auman

I installed solar electric panels through Solar City because it is environmentally the right thing to do. It ought to be mandatory on all new construction in AZ. But, if there was not net metering, I could not have afforded to go solar. I know APS is trying to protect their profits and rightfully so, but the Commission has to find ways to move AZ into world leadership in solar power, and APS has to be a world class electric utility leader. Thank you for your dedicated service in working to solve a very thorny problem. Ernie Bruss.

Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

Although we live in a capitalistic society, and there is nothing wrong with making profits for one's efforts, constantly altering laws to increase profits for a few corporations is absolutely unfair to average citizens who do not have the funds to influence politicians, and will lead to a totalitarian society which is no longer free OR a true capitalism.

Whether you believe in climate change due to man-made global warming or not, surely you cannot dispute the benefits of clean renewable energy, such as solar, which results in, at the least, cleaner air. Private citizens who invest in the future of clean air and preservation of our valuable resources should not be penalized.

I urge you to protect net metering.

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation -- systems installed on consumers' homes and businesses. Distributed generation not only assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering.

Thank you for considering my comments.

Sincerely,

Mr. Ross Mckenzie

Subject: Protect Net Metering

Dear Mr. Stump,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Donna Seward

Subject: Protect Net Metering and Jobs

Dear Corporation Commissioners,

As a utility customer who recently installed solar panels on our home, I am urging you to protect net-metering. Net-metering was one of the primary factors for us as we decided to make the significant investment in purchasing our solar panels. While it was also important to us that these solar panels will contribute in providing clean power, we couldn't have justified the expense if it wasn't for the fact that there would be fair credit for the power that is generated by them.

Utilities in the state want Arizona to change its successful net metering program, and we should all be highly concerned that this could result in not properly compensating customers for their valuable energy investments. As a person who will help make the decision whether we will be installing solar panels at my place of employment, I know that factor would have a huge impact in determining the viability of that kind of investment. It only makes sense that utility companies should have to compensate for the surplus power that is generated and contributed to the Arizona electrical grid by our solar systems.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

We are Arizona voters and utility customer and we are writing to urge you to protect net-metering.

Net metering ensures that solar customers like us receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and we are highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

We urge you to protect net metering.

Sincerely,
Don and Lucy Fimreite
15418 Sentinel Drive

Subject: Protect Solar Rights in Arizona

Jun 16, 2013

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation -- systems installed on consumers' homes and businesses. Distributed generation not only assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering.

Thank you for considering my comments.

Sincerely,

Mr. John & Jane Brunson
4214 E Spring Meadows Cir
Flagstaff, AZ 86004-9207

Subject: Net-metering

Dear Corporation Commissioner,

I am an Arizona voter, utility customer, and solar system owner that is on net-metering and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry. Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers like me for their valuable energy investments. I don't want the value of my solar-sytem to decline due to changes in the rules and I want others to benefit from net-metering and the economic stability that comes from lower electric bills.

Net-metering allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it. It makes us more economically independent and helps to clean the air, reduce reliance on non-renewable energy, reduce how much of our country we have to dig up for coal, and reduce the effect of climate change.

I urge you to protect net metering.

Sincerely,

Rick Freas

Dear Corporation Commissioner

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

I recently became a solar customer mainly to save money on my electric bill. Now with this proposal from APS to change it disturbs me very much. I may be able to save very little if any at all. That would be like them stealing our electricity that we produce.

I strongly urge you to vote to protect net-metering.

Thank you.

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering. I spent a lot of money to protect my financial stability by installing a solar generating system. Through no fault of my own, the system is dependent upon the local Utility company. Now the utility companies want to change the rules, fair is fair. If they are taking the energy provided by my system and using that energy, they should pay for it. Just as I have paid for the energy they provided and I have used over the years. I really think they should be paying for the excess my system provided at the current rate they are charging others that they provide electricity to.

Net metering ensures that solar customers like me receive an adequate credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

I am encouraging you as a utility customer, to protect Net Metering. It ensures for all of us who have gone the extra step in curbing high electrical usage, receive a fair credit for the clean power we pay back on the grid. This makes sense. Helping our communities, and defend our future in the resources and development of a growing industry is another. It's a win win situation and needs your protection.

Step 2. Use this sample letter to create your own message

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering

program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Subject: projet net metering

Dear Corporation Commissioner,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Mike Bruno

Those of us who have gone to the trouble of having Solar placed on our homes in order to save the environment are very troubled that you would even think of not have net metering. It is not as though we will get rich from this it is that WE are doing are part to help the planet. Net Meter and leave it alone for the rest of the people that want to go Solar as well. Subject: net metering

Please do not change the current net metering policy for solar customers. My husband and I took money from our much needed retirement funds to purchase solar for our home in an attempt to replace some of the energy we use, reduce our utility bills, and help the environment. Now utilities want to change the rules. This is not fair to individual consumers whom I believe you are tasked with protecting. If utilities are finding that too many customers are choosing solar and cutting into their profits, it should be a message to you and to the utilities that energy prices have now hit an all time high that consumers cannot afford or feel is justified.

Thank you for your attention to this matter.

Bob and Sylvia Collins

Subject: Keep Net Metering

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering. I have a 10KW solar system and a solar powered hot water heater. Without the net-metering I know I would not have gone forward with going solar, it just would not make economic sense to do so. With the abundance of sunshine in our state there is no reason we should not have solar systems on every rooftop.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.
